PRICES PAID BY FARMERS

The State, and U.S. averages of prices paid by farmers for goods and services presented in this summary are based primarily on the voluntary reports of thousands of merchants and dealers throughout the Nation. These estimates of average prices, together with computed indexes and index ratios, relate to transactions about the 15th of the designated month. Price data underlying the estimates are collected from dealers and merchants at regularly recurring intervals by means of mailed inquiries and personal enumeration.

Prices paid by farmers are collected for major commodities purchased. Data are collected largely by mail questionnaires, and for that reason commodities are described or specified as simply as practicable. Reporters are asked to quote the price of the most commonly sold item that best fits questionnaire definition or specification. Specifications vary considerably in amount of detail included. Some must, of necessity, be specific because the presence or absence of a certain feature may have a sizable effect on price. For example, in the case of tractors, horsepower classification or wheel vs crawler type materially affects price. Other commodities can be described in broad or general terms because various features are easily substitutable or the item has basic standard specifications. An example is "springtooth harrows" for which no specification other than number of sections is asked. Dealers are asked to report price of the size, grade, or quality of the item most commonly sold to farmers. For some items, where contents of packages vary considerably, respondents are asked to report both price and size of package most commonly sold. Prices reported for varying container or package sizes are then converted to a standard unit.

Average prices paid by farmers published in the following tables are a combined weighted average of chain and independent store prices for food and tobacco, household supplies, clothing and dry goods, household furnishings, building and fencing materials, motor supplies and farm supplies. Prices paid for farm machinery, field seed, livestock and poultry feed, fertilizer, baby chicks and turkey poults are based largely on quotations from independent operators. U.S. prices are weighted averages.

Beginning in January 1977, the Bureau of Labor Statistics (BLS) Consumer Price Index (CPI) was substituted for the Family Living Index computed by the Statistical Reporting Service. Consequently, SRS price surveys for food and clothing were discontinued the end of 1976. The last household furnishings survey was January 1977. These data are shown in this publication. The December farm machinery survey was also discontinued in 1976.

State or regional prices paid for feed, seed, fuels, and fertilizer are published currently in AGRICULTURAL PRICES, a monthly report of the Statistical Reporting Service of the United States Department of Agriculture, Washington, D.C.

Copies of this annual price summary are available upon request to the United States Department of Agriculture, Statistical Reporting Service, Washington, D.C. 20250

This is the 18th annual bulletin summarizing monthly, season, and annual average price estimates published previously in Agricultural Prices and in the various annual publications showing Production, Disposition, and Value. Also included are indexes of Prices Received by farmers for the period 1965-1976.

Prices Received by Farmers

The series designated Prices Received by Farmers relates to the average prices farmers receive for their products - generally at the point of first sale. Points of first sale by farmers range from sales on a graded, packed and delivered basis to bulk sales at the farm. The average price concept is that of a price which would result from dividing the total dollars received by all farmers for that commodity by the total quantity of the commodity sold. These estimates, except as noted below, do not measure the price of specified grades, kinds, or varieties at a common point of sale.

Milk sold to plants, apples, and citrus fruit are not estimated on the "as sold" basis. Milk is priced f.o.b. plant or receiving station. The apple price series relates to the equivalent packinghouse-door returns for Washington and Oregon, to equivalent returns for bulk fruit at first delivery point for California, and to the price at point of first sale for other States.

Monthly Prices. Prices for most commodities are collected during a 5-day period centered on the 15th of the month and represent average prices received for sales of the commodity during the month. For some commodities, prices published each month are reviewed at the end of the season and revised, if necessary, to take into account sales for the entire month. Notable among this group is meat animals. For the following commodities the estimate is defined as a monthly average: apples, peaches, pears, strawberries, citrus, potatoes, tobacco, milk sold to plants, broilers and wool. For cotton lint, preliminary prices cover sales during the first two weeks of the month while revised prices refect sales during the entire month. Beginning in August 1976, preliminary prices for rice are estimated on the same basis as cotton lint. Rice prices prior to August pertained to the 15th of the month. State prices received for any commodity are generally estimated only for months in which 0.5 percent or more of the States annual sales of the commodity occur.

Weights for computing monthly United States average prices are as follows: (a) Annual production or sales for all meat animals except beef cattle, milkfat in cream, and wool. At the end of the calendar year United States wool prices are recomputed, using estimated sales during the month; (b) January 1 inventory numbers for milk cows; (c) Estimated marketings during the month for all other commodities.

State season average prices are computed by weighting monthly prices by the estimated percentage of sales made each month in the marketing season. Also included in the season average price are allowances for unredeemed loans and purchases by the Government, if any, valued at the average loan and purchase rate, by States. United States season average prices are computed by weighting State season average prices by the estimated quantities sold in each State. Marketing seasons for each commodity are shown on pages 181 and 182.

State annual average prices are computed by weighting monthly prices by the estimated proportion of the calendar year sales made each month. United States average prices are obtained by weighting State annual average prices by estimated quantities sold in each State.

1/ STATE SEASON AVERAGE PRICES ARE COMPUTED BY WEIGHTING STATE MONTHLY PRICES BY ESTIMATED SALES FOR THE MONTH. U.S. SEASON AVERAGE PRICE IS COMPUTED BY WEIGHTING STATE SEASON AVERAGES BY ESTIMATED SALES FOR THE CROP YEAR. THE MONTHLY PRICES REFER TO ALL POTATOES BEING SOLD IN A GIVEN MONTH REGARDLESS OF THE YEAR HARVESTED. THUS, THE U.S. ALL POTATO PRICE FOR APRIL 1975 INCLUDES SALES FROM THE 1974 FALL CROP AND THE 1975 WINTER AND 1975 SPRING CROPS.

2/ REFERS TO CROP OF DESIGNATED YEAR.

1/ THE ALL HAY PRICE IS THE WEIGHTED AVERAGE OF THE SEPARATE KINDS. PRIOR TO JANUARY 1972 THESE WERE ALFALFA, CLOVER-TIMOTHY, LESPEDEZA, PEANUT VINE, GRAIN, WILD, AND ALL OTHER. IN JANUARY 1972 ALL KINDS EXCEPT ALFALFA WERE COMBINED. MID-MONTH PRICES ARE WEIGHTED BY THE ESTIMATED PERCENT SOLD EACH MONTH IN COMPUTING STATE SEASON AVERAGE PRICES. 2/ REFERS TO CROP OF YEAR DESIGNATED. 3/ MONTHLY PRICES DISCONTINUED BEGINNING JUNE 1976.

ALFALFA HAY, BALED: MONTHLY AVERAGE PRICE PER TON RECEIVED BY FARMERS, BY STATES, 1976; UNITED STATES, 1971-76
